PREFACE

The Utah Department of Employment Security's Labor Market Information Services, a Primary Participant in the Utah State Data Center, has received a considerable amount of 1980 Census data. This publication is a compilation of some of the more interesting census statistics. These data are presented, in tabular and pictorial form, for the State of Utah and its 29 counties. The following documents are the sources of these statistics.

1. Publications PC80-1-A46 and B46, *Number of Inhabitants* and *General Population Characteristics*, and HC80-1-A46, *General Housing Characteristics*, published by the U. S. Department of Commerce, Bureau of the Census. These reports contain population counts and demographic and housing characteristics for the State of Utah and various sub-areas, including counties, from the 1980 Census, and are based on the 100 percent count.

2. Report 1A: *Population Characteristics*, published by the Physics, Computer Science and Mathematics Division of Lawrence Berkeley Laboratory at the University of California in Berkeley. This report was prepared under the sponsorship of the Employment and Training Administration, U. S. Department of Labor, and the National Technical Information Service, U. S. Department of Commerce. It is part of a series of reports compiled from the 1980 Census Summary Tape Files, and is published for each state, the U. S. as a whole, and subareas within states. The data in these reports are based on the 100 percent count.

3. *Summary Tape File (STF) 3A* from the 1980 Census, which contains data compiled from the long-form questionnaire. In the census, the long-form questionnaires were distributed to a random sample of about 20 percent of the households in the country, whereas the short-forms went to every household (the short form is contained within the long-form). In metropolitan and other urban areas, the sampling ratio was one-in-six; in rural areas (population less than 2,500) it was one-in-two. Thus, the data from this source are estimates that are subject to sampling variability. The various population and housing tables from this computer tape were distributed by the Utah State Data Center, State Planning Coordinator's Office. From these printouts, tables 21, 22, and 24-36 in this publication were constructed.

The definitions of census terminology presented in the Description of Tables were taken from the publications listed in items 1 and 2, and from the Census Bureau's *User's Guide*, PHC80-R1-B, Part B-Glossary. The mapping programs used for the maps in this publication were developed by the Utah Department of Employment Security, Labor Market Information Services.

DESCRIPTION OF TABLES

The following list presents a description of each table. Where necessary, brief definitions of Census terms are also provided. These definitions were extracted from the 1980 census publications described in the preface.

Accompanying each table is a county outline map of Utah. Each map depicts, through shading, the intercounty variation of a noteworthy ratio from its table. The names of the counties have been omitted from the maps to avoid cluttering them. The map on the inside front cover contains the county names and may be used for reference.

TABLE		PAGE
1	**Population of Utah and Its Counties: 1980 and 1970.** Using the final population counts from the 1980 and 1970 censuses, the percentage increase in the population of each county was calculated. This table and the following table are reprints of portions of Table 2 from the Census Bureau publication "Number of Inhabitants (PC80-1-A46)."	3
2	**Population per Square Mile by County: April 1980.** For each county the 1980 census population count is divided by the land area in square miles to produce the population per square mile.	5
3	**Persons of Spanish/Hispanic Origin by County: April 1980.** Persons of Spanish/Hispanic origin or descent are those who classified themselves in one of the specific Spanish origin categories listed on the questionnaire — Mexican, Puerto Rican, or Cuban — as well as those who indicated that they were of other Spanish/Hispanic origin. Persons of Spanish origin may be of any race.	7
4	**Median Age of Population: April 1980.** The median age of the population is the age in years at which half of the population was older, and half was younger on April 1, 1980.	9
5	**Population Under Age 18 by County: April 1980.** The total population and the number and percent of people ages 0-17 are shown for each county.	11
6	**Population Ages 18 to 64 Years by County: April 1980.** The number and percent of persons ages 18 through 64, in addition to the total population, is shown for each county.	13
7	**Population Age 65 and Over by County: April 1980.** This table contains the percentage that the population age 65 and over was of the total population in April 1980, by county. The appropriate population counts are also provided.	15
8	**Fertility Ratio by County: April 1980.** The fertility ratio shown in Table 8 is the number of children under 5 years old per 1,000 women 15 to 49 years old.	17
9	**Persons per Household by County: April 1980.** The measure "persons per household" is obtained by dividing the number of persons in households by the number of households. A household includes all the persons who occupy a housing unit. A housing unit is a house, an apartment, a group of rooms, or a single room occupied as a separate living quarters.	

TABLE

PAGE

9 (cont'd) Separate living quarters are those in which the occupants live and eat separately from other persons in the building and have direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements.

The 1980 definition of a household differs from that used in 1970 only in the change in the definition of housing unit to eliminate the requirement for complete kitchen facilities for the exclusive use of the household. The household reference person in 1970 was the "head of the household" (the husband in married-couple families); for 1980 it was changed to "the household member (or one of the members) in whose name the house is owned or rented." In 1970, 6 or more unrelated persons living together were classified as group quarters; for 1980 that requirement was raised to 10 or more unrelated persons. 19

10 **Persons per Family by County: April 1980.** A family consists of a householder and one or more other persons living in the same household who are related to the householder by birth, marriage, or adoption; all persons in a household who are related to the householder are regarded as members of his or her family.

Not all households contain families, because a household may be composed of a group of unrelated persons or one person living alone. The measure "person per family" is obtained by dividing the number of persons in families by the total number of families. 21

11 **Percent of Persons in Group Quarters: April 1980.** All persons not living in households are classified by the Bureau of the Census as living in group quarters. Two general categories of persons in group quarters are recognized:

Inmate of institution — Persons under care or custody in institutions at the time of enumeration are classified as "patients or inmates" of an institution regardless of their length of stay in that place and regardless of the number of people in that place. Institutions include homes, schools, hospitals, or wards for the physically or mentally ill or handicapped; homes for unmarried mothers; nursing, convalescent, and rest homes for the aged and dependent; orphanages; and correctional institutions.

Other — This category includes all persons living in group quarters who are not inmates of institutions. Rooming and boarding houses, communes, farm and nonfarm workers' dormitories, convents or monasteries, and other living quarters are classified as "other" group quarters if 10 or more unrelated persons share the unit. Persons residing in certain other types of living arrangements are classified as living in "other" group quarters regardless of the number or relationship of people in the unit. These include persons residing in military barracks, on ships, in college dormitories, or in sorority and fraternity houses; patients in general or maternity wards of hospitals who have no usual residence elsewhere; staff members in institutional quarters; and persons enumerated in missions, flophouses, Salvation Army shelters, railroad stations, etc.

This table presents, for Utah and its counties, the total population and the number and percent that were living in group quarters on April 1, 1980. 23

TABLE		PAGE
12	**Percent of Households with One Person Only: April 1980.** This table contains the Census counts of the total number of households and of the number of one-person households. The latter divided by the former produces the percentage of households with one person only.	25
13	**Number of Households and Married Couple Families: April 1980.** In this table is presented the total number of households and, of these, the number and percent that consist of a married couple family.	27
14	**Total and "Other Family" Households** (2 or More Persons, no Married Couples). Within the total number of households are those containing two or more related people but not containing married couple families. This table presents the 1980 Census counts of the total and "Other Family" households for each of Utah's counties.	29
15	**Households with Children, Total and Those Headed by Women: April 1980.** This table presents, for each county, the number of households containing children (persons under age 18), and the number and percentage of those that are headed by women.	31
16	**Population Age 15 and Over, and Number Divorced or Widowed: April 1980.** This table presents the total number of persons age 15 and over, and, of these, the number whose marital status at the time of the census (April 1, 1980) was either "Divorced" or "Widowed."	33
17	**Total, Owner-Occupied and Renter-Occupied Housing Units.** The total number of occupied housing units, which is the same as the total number of households, is shown for each county. The number and percent of owner-occupied units, and the number of renter-occupied housing units are also presented. A housing unit is classified as occupied if it is the usual place of residence of the person or group of persons living in it at the time of enumeration, or if the occupants are only temporarily absent, such as away on vacation. If all the persons staying in the unit at the time of the census have their usual place of residence elsewhere, the unit is classified as vacant.	35
18	**Median Value of Owner-Occupied Housing Units: April 1980.** Value is the respondent's estimate of how much the property (house and lot) or condominium unit would sell for, if it were for sale. Value statistics are presented for "specified owner-occupied" housing units. These "specified" housing units include only one-family houses on less than 10 acres without a commercial establishment or medical office on the property. Mobile homes, trailers, boats, tents or vans occupied as a usual residence, and owner-occupied noncondominium units in multi-family buildings are also excluded from the value tabulations.	37
19	**Median Contract Rent of Renter-Occupied Housing Units.** Contract rent is the monthly rent agreed to, or contracted for, regardless of any furnishings, utilities, or services that may be included. The statistics on rent are tabulated for "specified renter-occupied" housing units which include renter units except one-family houses on 10 or more acres. Respondents were asked to report rent only for the housing unit enumerated and to exclude any rent paid for additional units or for business premises. Renter units occupied without payment of cash rent are shown separately as "no cash rent" in the rent tabulations.	39

TABLE		PAGE
20	**Number and Percent of Occupied Housing Units with More Than 1 Person per Room.** "Persons per room" is obtained by dividing the number of persons in each occupied housing unit by the number of rooms in the unit. The figures shown refer, therefore, to the number of occupied housing units having the specified ratio of persons per room. The census count of rooms is the number of whole rooms used for living purposes. For each unit they include living rooms, dining rooms, kitchens, bedrooms, finished recreation rooms, enclosed porches suitable for year-round use, and lodger's rooms. Excluded are strip or pullman kitchens, bathrooms, open porches, balconies, halls, half-rooms, utility rooms, unfinished attics or basements, or other space used for storage.	41
21	**Number and Percent of County Residents Born in Utah.** For the state and each county, Table 21 presents the number and percent of the residents who were born in the State of Utah.	43
22	**Percent of 1980 Residents Age 5 and Over Who Lived Elsewhere in 1975.** Of all the residents of Utah age 5 years and older, 18 percent lived outside of Utah in 1975. Table 22 presents, for each of Utah's counties, the number and percentage of residents who lived outside of that county in 1975. The sum of the county inmigrants is 336,134, which is the number of Utah residents who lived in a different county, state or country in 1975.	45
23	**Percent of Housing Units as Condominiums: April 1980.** The total number of year-round housing units, which includes both vacant and occupied, is shown for the state and each county. Also shown is the count and percentage of condominium units (vacant plus occupied). A condominium is an apartment in a building, or a house in a development, which is separately owned. The owner has a deed to the individual unit, and also holds a common or joint ownership in all common areas, such as grounds, lobbies, etc.	47
24	**Households Containing 6 or More Members: April 1980.** Along with the total number of households, the number and percent of households containing six or more members is presented for the state and each county.	49
25	**Labor Force Participation Rates by County: April 1980.** The civilian population age 16 and over can be separated into two categories: the civilian labor force, and persons not in the labor force. The civilian labor force consists of employed persons and unemployed persons. Employed persons comprise (a) all those who during the reference week (week before the census) did any work at all as paid employees, in their own business, profession or farm, or who worked 15 hours or more as unpaid workers in an enterprise operated by a member of the family, and (b) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, labor-management dispute or personal reasons, whether or not they were paid by their employers for the time off, and whether or not they were seeking other jobs. Unemployed persons comprise all persons who did not work during the reference week, who made specific efforts to find a job within the past 4 weeks, and who were available for work during the reference week (except for temporary illness). Also included as unemployed are those who did not work at all, were available for work, and (a) were waiting to be called back to a job from which they had been laid off; or (b) were waiting to report to a new wage or salary job within 30 days. The labor force participation rate is the ratio of the civilian labor force to the civilian population age 16 and over.	51

TABLE PAGE

26 **Mothers with Children Under Age 6: Total, and In Labor Force.** The labor force involvement of mothers with pre-school children is of considerable interest. This table presents the total number of mothers with children under age six, and of these, the number and percent that are in the labor force. This percentage is the labor force participation rate for these women. 53

27 **Employed Persons by Place of Work: April 1980.** One of the census questions asked employed persons to indicate the address of their work location. This information, along with the residential addresses of these workers, provides the basis for extensive worker commutation tabulations. The first release of 1980 census commuting data for Utah's counties is summarized in Table 27. This table presents the total number of employed persons (excluding roughly 8 percent who did not respond to the place of work question) disaggregated into two categories: worked in county of residence, and worked out of county of residence. The latter category is further disaggregated into "in state" and "out of state." Detailed commutation tables will be available at a later date. 55

28 **Government Workers as Percent of Total Employed Persons: April 1980.** Table 28 presents the total number of employed persons and, of these, the number and percent of persons who reported that they were employed by a governmental unit. Each employed person is classified in three distinct dimensions — occupation, industrial attachment, and class of worker. Class of worker means the classification of workers according to the type of ownership of the employing organization. The class-of-worker item in the census questionnaire consists of seven categories which are defined as follows:

1. Private wage and salary workers. Persons who worked for a private employer for wages, salary, commission, tips, pay-in-kind, or at piece rates.

2. Government workers. Persons who worked for any governmental unit regardless of the activity of the particular agency. Employees of public schools, government-owned bus lines, government-owned electric power utilites, etc. are included, but employees of private organizations which do contract work for government agencies are not included. Government workers include persons elected to paid offices. Persons on active duty in the Armed Forces are Federal Government employees; however, class-of-worker tabulations are limited to civilians.

   The "government workers" category is subdivided by the level of government: Federal Government workers, State Government workers, and Local Government workers.

3. Self-employed workers.

   a. Own business not incoporated — Persons who worked for profit or fees in their own unincorporated business, profession, or trade, or who operated a farm. Included here are the owner-operators of large or small stores and manufacturing establishments as well as independent craftsmen and professionals, farmers, peddlers, and other persons who conducted enterprises on their own.

   b. Own business incorporated — Persons whose own business is incorporated are counted as employees of their corporation and are tabulated in the "private wage and salary workers" category.

TABLE PAGE

28 (cont'd) 4. Unpaid family workers. Persons who worked without pay on a farm or in a business operated by a person to whom they are related by blood or marriage. These are usually the children or the spouse of the owner of a business or farm. About one-half of the unpaid family workers are farm laborers. Unpaid family workers who reported working fewer than 15 hours during the reference week were not considered to be "at work" in the determination of labor force status. 57

29 **Agricultural Workers as Percent of All Employed Persons: April 1980.** This table shows the total number of employed persons and the number of those whose primary occupation was an agricultural job. This category includes farming, forestry, and fishing occupations. These numbers may be slightly different from 1980 census industrial attachment agricultural figures to be released later. 59

30 **Persons Age 16-64 With a Work Disability: April 1980.** Having a work disability means that the person has a long-term health condition that prevents him/her from working or limits the kind or amount of work the person can do. The health condition may be physical, mental, or emotional. Kind of work is defined to mean the type of work the person would usually perform. Amount of work can refer to actual time the person is able to work, or the quantity of work produced. For example, a craftsman who can work 40 hours a week but cannot produce as much as he could prior to an injury is considered limited in the amount of work.

Persons so classified may be in, or out of, the labor force. By Census Bureau definition, the work disability determination is made for persons ages 16-64. Thus, table 30 presents the total population age 16-64, and, of these, the number and percent that have a work disability. 61

31 **Persons Age 18 and Over Who Have Completed High School.** Data on years of school completed in this report were derived from the combination of answers to two questions (a) "What is the highest grade of school this person has ever attended?" and (b) "Did this person finish this grade?"

These questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional school degree.

Table 31 presents for April 1980 the total population age 18 and over, and the number and percent of those who had completed high school. 63

32 **Persons Age 18 and Over With Four or More Years of College.** In addition to the population age 18 and over, this table presents, for each county, the number and percent of persons who had completed four or more years of college at the time of the census. 65

33 **1979 Median Family Income.** The median family income is the amount which divides the total number of families with income into two groups of equal size, one having incomes above the median, and the other having incomes below the median.

TABLE		PAGE
33 (cont'd)	Information on money income received in the calendar year 1979 was requested from all persons 15 years old and over. "Total income" is the algebraic sum of wage or salary income, nonfarm net self-employment income, farm net self-employment income, Social Security or railroad retirement income, public assistance or welfare income, and all other income. The figures represent the amount of income regularly received before deductions for personal income taxes, Social Security, bond purchases, union dues, medicare deductions, etc. Receipts from the following sources were not included as income: money received from the sale of property (unless the recipient was engaged in the business of selling such property); the value of income "in kind" such as food produced and consumed in the home, or free living quarters; withdrawal of bank deposits; money borrowed; tax refunds; exchange of money between relatives living in the same household; gifts and lump-sum inheritances, insurance payments, and other types of lump-sum receipts.	67
34	**Utah Households with 1979 Social Security Income.** Social Security income includes cash receipts of Social Security pensions, survivors' benefits, permanent disability insurance payments, and special benefit payments made by the Social Security Administration (under the National old-age, survivors, disability, and health insurance programs) before deductions of health insurance premiums. "Medicare" reimbursements are not included. This table presents the total number of households, and, of these, the number and percent that received Social Security income in the Year 1979.	69
35	**Utah Households With 1979 Public Assistance Income.** Public assistance income includes cash receipts of payments made under the following public assistance programs: aid to families with dependent children, old age assistance, general assistance, aid to the blind, and aid to the permanently and totally disabled. Separate payments received for hospital or other medical care are excluded from this item. In table 35 is presented the total number of households, and the number and percent that received public assistance income in 1979.	71
36	**Percent of Utah Families With 1979 Income Below Poverty Level.** Families and unrelated individuals are classified as above or below the poverty level by comparing their total 1979 income to an income cutoff or "poverty threshold." The income cutoffs vary by family size, number of children, and age of family householder or unrelated individual. Poverty status is determined for all families (and, by implication, all family members). Poverty status is also determined for persons not in families, except for inmates of institutions, members of the Armed Forces living in barracks, college students living in dormitories, and unrelated individuals under 15 years old. Poverty status is derived on a sample basis. The 1980 census definition of poverty reflects revisions recommended by a Federal interagency committee in 1979 to a definition adopted in 1969. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index (CPI). Cutoffs for 1979 income used in poverty statistics in the 1980 census are presented on the following page. As an example, the poverty threshold for a family of four with two related children under 18 is $7,356 in 1979.	

36 (con't) Poverty thresholds are computed on a national basis only. No attempt has been made to adjust these thresholds for regional, state, or other local variations in the cost of living.

The term "poverty" connotes a complex set of economic, social, and psychological conditions. The standard statistical definition provides only estimates of economic poverty based on the receipt of money income before taxes. Excluded from the income concept is a measure of the benefits derived from the receipt of in-kind government transfers, such as food stamps, medicaid, and public housing; private transfers such as health insurance premiums paid by employers; the value of the services obtained from the ownership of assets, such as owner-occupied housing units; and the receipt of money from the sale of property, withdrawal of bank deposits, gifts and money borrowed. A comprehensive review of the current poverty definition and its limitations can be found in The *Measure of Poverty*, U. S. Department of Health, Education, and Welfare, April 1976. 73

TABLE A. POVERTY LEVEL THRESHOLDS IN 1979 BY SIZE OF FAMILY AND NUMBER OF RELATED CHILDREN UNDER 18 YEARS OLD

Size of Family Unit	Weighted Average Thresholds	Related Children Under 18 Years								
		None	1	2	3	4	5	6	7	8 or more
1 person (unrelated individual)	$3,686									
under 65 years	3,774	$3,774								
65 years and over	3,479	3,479								
2 persons	4,723									
Householder under 65 years	4,876	4,858	$5,000							
Householder 65 yrs and over	4,389	4,365	4,981							
3 persons	5,787	5,674	5,839	$5,844						
4 persons	7,412	7,482	7,605	7,356	$7,382					
5 persons	8,776	9,023	9,154	8,874	8,657	$8,525				
6 persons	9,915	10,378	10,419	10,205	9,999	9,693	$9,512			
7 persons	11,237	11,941	12,016	11,759	11,580	11,246	10,857	$10,429		
8 persons	12,484	13,356	13,473	13,231	13,018	12,717	12,334	11,936	$11,835	
9 persons or more	14,812	16,066	16,144	15,929	15,749	15,453	15,046	14,677	14,586	$14,024
